

BIORETENTION SOIL 65

PRODUCT DESCRIPTION

Bioretention Soil 65 is a special mixture of sand, silt and clay. Our Bio Retention Soil is amended with compost, washed concrete sand, sandy loam topsoil. This mixture provides a consistent texture for drainage and plant growth.

Compliant with County of San Diego's Best Management Practice (BMP September 2020)
Appendix F Table 803-8

PRODUCT USES:

Bioretention Soil 65 is intended primarily for use wherever good drainage is needed. Bioretention Soil 65 can also be blended with a variety of soil amendments for back-filling holes for trees and shrubs in the basin.

ANALYSIS:

Screen size	1/2 "
