

FOREST FLOOR 3" - 3/8"

PRODUCT DESCRIPTION

This product is fibrous, containing a high percentage of well composted wood. It is highly effective for mulching and erosion control. It is commonly used for garden paths, mulching tree basins, and large non-landscaped areas such as roadway medians and rights of way. If placed sufficiently dense, it will retard weed growth while providing the other benefits of mulching. This product is a dark looking mulch and holds its color. This product is not recommended for playground use. Application rates are recommended at a minimum of 3 cubic yards per 1,000 square feet, which will provide 1 inch of mulch depth, to as much as 12 cubic yards per 1,000 square feet, which will provide up to 4 inches of mulch depth.

SPECIFICATION:

The mulch shall consist of fibrous, well composted woody recycled mixture of various particle sizes.

PHYSICAL PROPERTIES:	<u>PERCENT PASSING</u>	<u>SIEVE SIZE</u>
	90-100	25.4MM (1")
	80-100	12.7MM (1/2")
		6.35MM (1/4")
